

ISOLATION AND FIXATION

Dental Dam

Upgrade your isolation

 COLTENE

Upgrade Your Isolation

Complete isolation with dental dam is crucial in Endodontic and Restorative dentistry. It helps produce a dry working field to ensure both reliable and high-quality treatment results, protects patients from aspiration or ingestion of foreign objects, and protects soft tissue from contact with other instruments. Studies show that dental dam is also an effective infection control barrier and can

significantly reduce the load of possible infectious airborne particles and minimize saliva and blood contaminated aerosol or spatter.^{1,2} For decades COLTENE has produced a comprehensive portfolio of high-quality dental dam, clamps, and accessories. Upgrade your Isolation with COLTENE.

COMPREHENSIVE

We offer a comprehensive line of products to help isolate in each clinical situation.

SIMPLE

Dental dam application is actually a simple process. Choose the best possible material to meet your specific treatment needs as we guide you through the selection process.

SOLUTION DRIVEN

Our high quality products are engineered to facilitate isolation. Our products and training materials are the bridge that connect solutions with your treatment requirements.

1) Peng, X., Xu, X., Li, Y. et al. Transmission routes of 2019-nCoV and controls in dental practice. *Int J Oral Sci* 12, 9 (2020). <https://doi.org/10.1038/s41368-020-0075-9>

protection

Selection Guidelines

Dental Dam

Our variety of dam materials ensure that the specific requirements of each clinical situation and treatment procedure are successfully and effectively met. Elasticity, the ability to retract, thickness, color and non-allergenic are relevant features to consider when choosing the most appropriate material.

Recommendations

RETRACTION

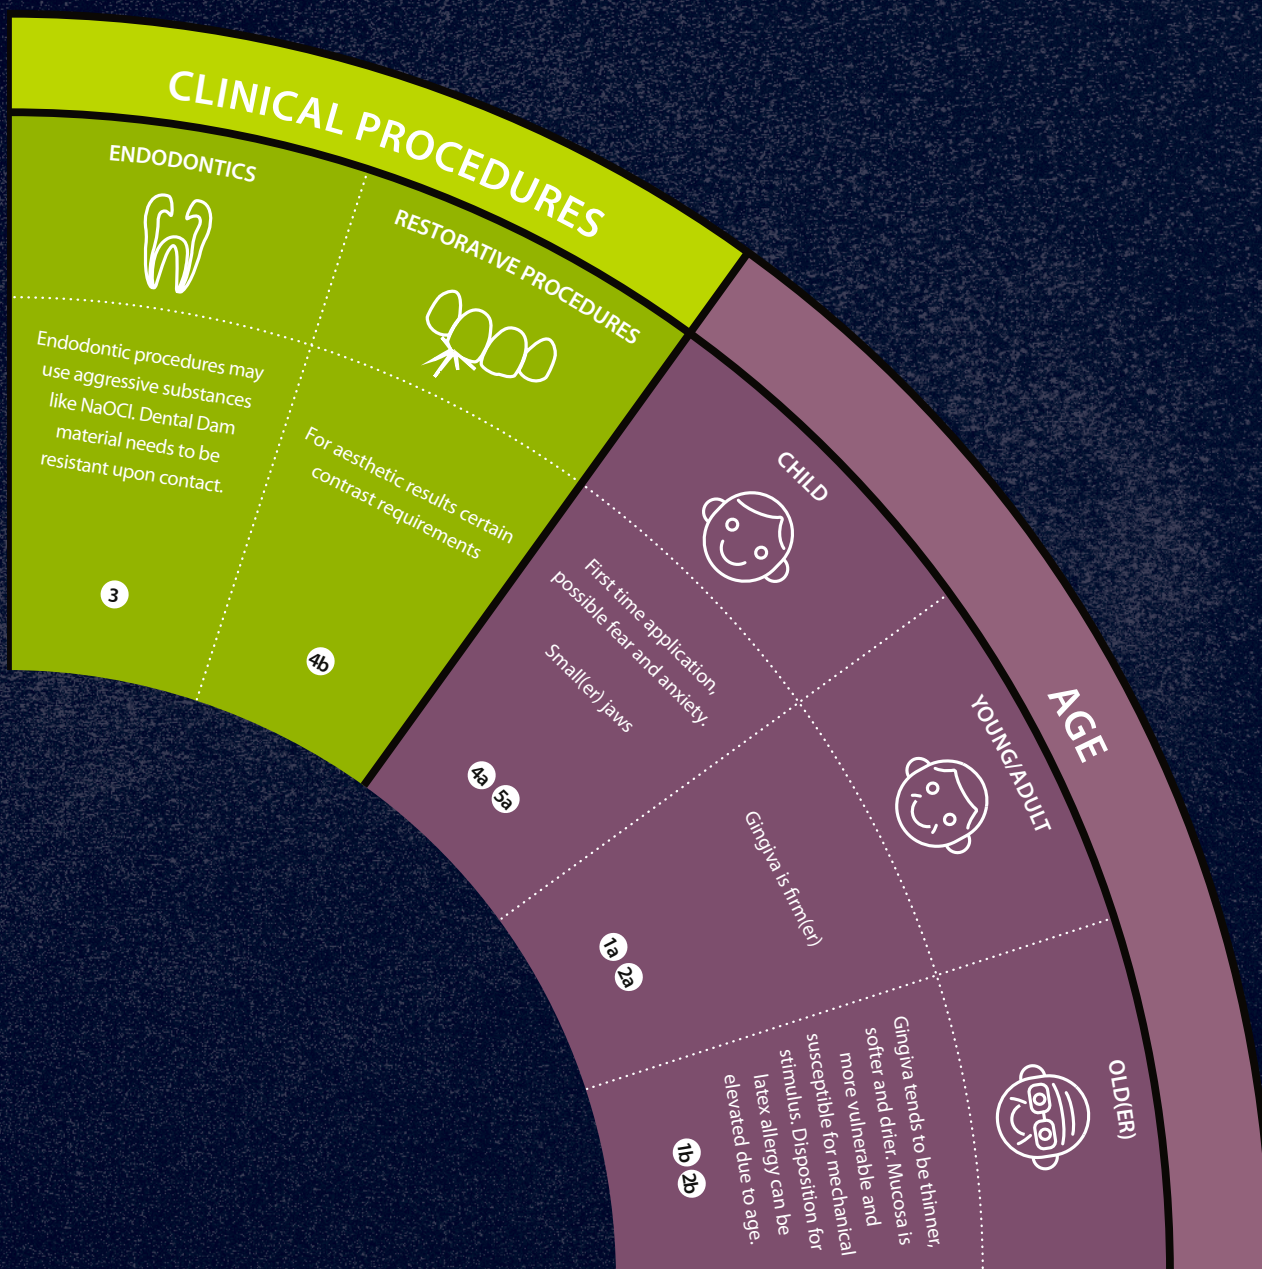

- 1a**
Choose latex dental dam. Thicker dam allows for better retraction for a tight fit around the isolated area.
- 1b**
Choose a more flexible and thinner dental dam with less retraction which will ease any stress on the gingiva.

ALLERGENS

- 2a**
Choose a powder-free dental dam to reduce the exposure to latex proteins and minimize the risk of developing a latex allergy.
- 2b**
Choose a non-latex dam and avoid allergic reactions on latex proteins.

RESISTANCE

- 3**
Choose latex dental dam as it affords the highest resistance to contact of foreign substances.

COLOUR OPTIONS

- 4a**
Use psychology and education to take advantage of light and pleasant colours for a calming effect.
- 4b**
Choose a darker dental dam to reduce eye fatigue and provide a good contrast to the working area.

SIZE AND APPLICATION AIDS

- 5a**
Choose 127 x 127 mm dental dam for smaller patients.
- 5b**
Choose Flexi Dam with built-in flexible frame for less stress on the patient.

GENERAL RECOMMENDATIONS

- › Cut out the dental dam sheet so that nose breathing is possible
- › Put Parotisroll on the upper lip to create space between nose and the dental dam sheet
- › Use Dental Dam napkins to ease the contact of the dam material with the skin

Dental Dam Portfolio

Application

NON-LATEX

Dental Dam Non-Latex

Made of a resistant material with latex resembling retraction properties. Ideal for strong retraction.

Flexi Dam Non-Latex

Made of a highly elastic elastomer with reduced tension. It's flexibility facilitates its application on tight contact point. Ideal for soft retraction.

Flexi Dam® Framed Non-Latex

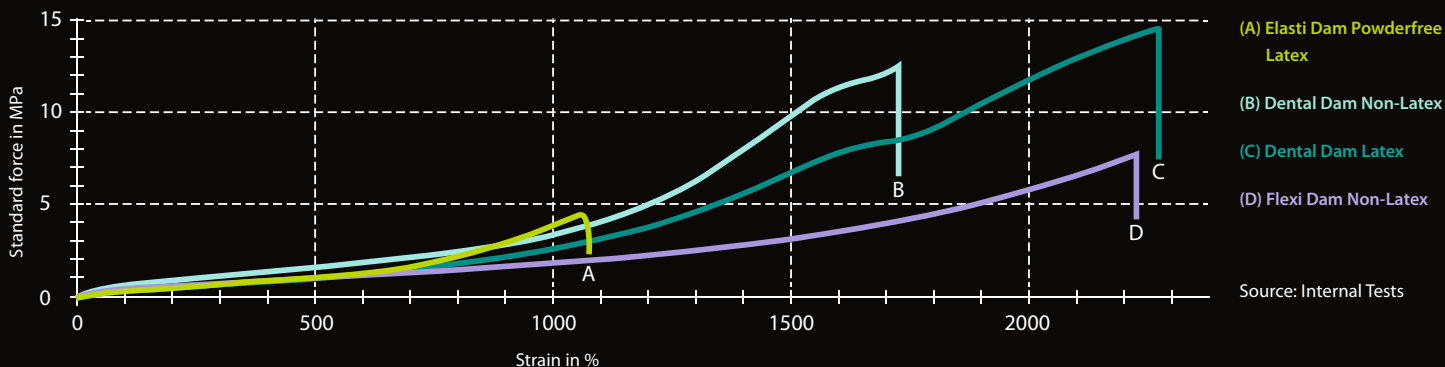

Available with a convenient, built-in frame designed to fit comfortably around the oral cavity while also saving time in the process.

	Dental Dam Non-Latex	Flexi Dam Non-Latex	Flexi Dam Framed Non-Latex
Retraction	×××	×	×
Elasticity	-----	-----	-----

Thickness	medium	medium	medium
Colours	■	■ ■ ■	■
Scent	-	-	-
Children Size 127 × 127 mm	✓	-	-

Stress-strain diagram

Flexi Dam Non-Latex performs with high elasticity while tension is moderate. It is ideal for softer retraction. **Dental Dam Non-Latex** is not as elastic as Flexi Dam while showing higher tension. Retraction forces on the gingiva are higher. It is the latexfree alternative to latex when seeking strong retraction. **Dental Dam Latex** provides best possible retraction

LATEX

Dental Dam Latex

Dental Dam Latex is made of pure, natural rubber latex. Tough and hard to tear, the powdered material is used as a barrier during operative and endodontic procedures.

Fiesta® Dental Dam Latex

Fruit scented latex dam for greater patient and staff comfort. Each box contains an assortment of purple, blue and pink colored sheets.

Elasti Dam® Powderfree Latex

Elasti Dam is an extra elastic and tear resistant latex dam facilitating the application. It is powderfree and has a controlled low level of protein. Patient and dental team are less exposed to allergenic particles and face a lower risk of developing a latex allergy.

Dental Dam Kits

REF	DESCRIPTION	DENTAL DAM	PUNCH & FORCAPS
H02778	Winged Complete Kit	Latex	Premium
H02900	Winged Simple Dam Kit	Powderfree Latex	Standard
H02790	Wingless Complete Kit	Latex	Premium
H02779	Winged Standard Kit		None

All kits include: Fiesta 9 Clamp Set, plastic frame and Wedjets.

Punch

REF
H01261

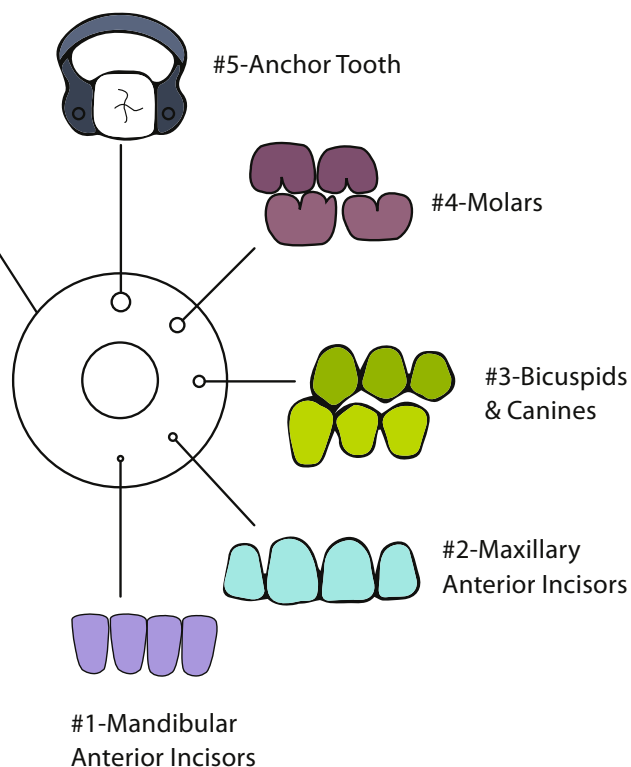

Ainsworth-style stainless steel punch with 5 holes for use with Elasti Dam, Flexi Dam, Dental Dam Latex and Dental Dam Non-Latex. Easy to handle and can be sterilized.

Forceps

REF
H01262

Manufactured from high quality stainless steel to enable secure transfer and fixation of a clamp to a tooth. Engineered for a light-weight, comfortable grip and a matte finish to reduce eye fatigue.

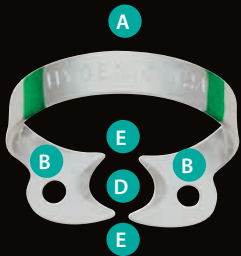

Fixation

Clamps

Dental dam fit partly depends on how it is secured to the teeth. COLTENE makes fixation simple with both Wingless and Winged clamps. Winged clamps have projections at the jaws while wingless do not. Our aim is to accommodate application techniques with any dentist's style. Our dental dam clamps are manufactured from high quality stainless steel for greater durability.

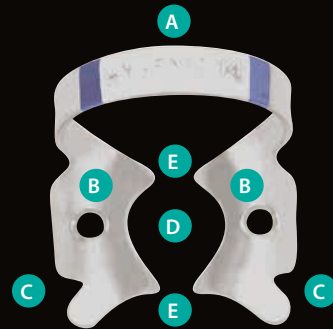

WINGLESS

- A Distal Bow
- B Jaws
- C Wings
- D Beak
- E Contact points

Wingless clamps are positioned intra-orally first and then the dam is stretched over the clamp and tooth. Our wingless clamps are designated with a W for easy identification.

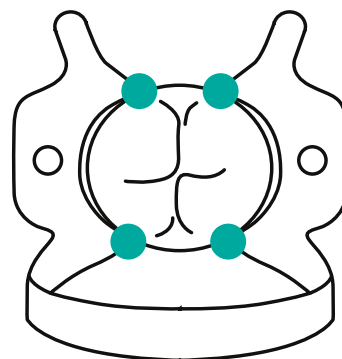

WINGED

Winged clamps combine steps by placing the dam, clamp and frame simultaneously. Once applied, the dam is stretched off the wings of the clamp.

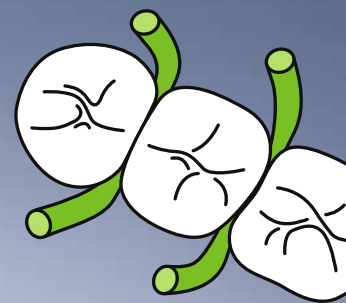

Four-Point Contact

Select a clamp that will maintain four-point contact with the tooth's proximal surfaces. The clamp is positioned with the bow on the distal of the tooth. Universal clamps can be used on the left and the right side of both the upper and the lower jaw. Both clamp jaws are equal.

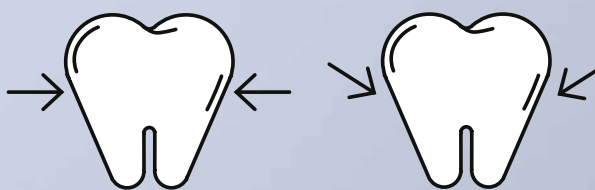

Wedjets – Stabilization Cord 5

Wedjets elastic stabilizing cord provides a quick and easy way to retain dental dam and can complement or supplement clamp usage.

Brinker Clamps 4

Provide maximum retraction without laceration of gingival tissue

Retention – horizontal effect

Retention – apical effect

- 1 Standard clamps
- 2 Fiesta colour coded clamps
- 3 Tiger clamps
- 4 Brinker clamps
- 5 Wedjets

Select your clamps

Select a clamp that will maintain four-point contact with the tooth's proximal surfaces. The clamp is positioned with the bow on the distal of the tooth. Universal clamps can be used on the left and the right side of both the upper and the lower jaw. Both clamp jaws are equal. Our comprehensive selection of anatomical shapes help aid in quick and easy placement.

Standard clamps

Gloss finished standard clamps.
